ABSTRACT

The objective of this study was to provide the library community with basic statistical data from on-line activity in the Ohio State University Libraries' Circulation System. Over 1.6 million archive records in the circulation system for 1972 were investigated to produce subject reports of circulation activity, activity reports by collection location, listings of material for highly active titles, and an activity report on a random sample of titles taken from the National Lending Library. Requests were analyzed, computer programs were created to process the data, and the reports were reproduced in the form of data to be used by librarians and library administrators. Most of the data collected on high volume titles is omitted from this version of the report. (CH/PP)

* Documents acquired by ERIC include many informal unpublished *
* materials not available from other sources. ERIC makes every effort *
* to obtain the best copy available. Nevertheless, items of marginal *
* reproducibility are often encountered and this affects the quality *
* of the microfiche and hardcopy reproductions ERIC makes available *
* via the ERIC Document Reproduction Service (EDRS). EDRS is not *
* responsible for the quality of the original document. Reproductions *
* supplied by EDRS are the best that can be made from the original. *

ABSTRACT

Over 1.6 million archive records in The Ohio State University Libraries circulation system for the calendar year 1972 were investigated to produce: (1) subject reports of circulation activity, (2) activity reports by collection location, (3) detail listings by type of material for highly active titles, and (4) an activity report on a random sample of titles taken from the National Lending Library. These reports provide the library community with basic derived statistical data to be used for additional research and study.

A SELECTIVE STATISTICAL STUDY OF TRANSACTION ACTIVITY IN A LARGE ON-LINE AUTOMATED CIRCULATION SYSTEM

OBJECTIVES

The prime objective of this study is to provide the general library community with basic derived statistical data from on-line activity in The Ohio State University Libraries' Circulation System (LCS). As the first on-line interactive circulation system in a major research library, LCS should provide data of interest to other institutions considering automation. In addition, subject activity analysis will be of general interest to librarians who are concerned with collection usage.

A secondary objective is to demonstrate the capability of modern computer systems to collect and tabulate enormous volumes of data which were, prior to automation, unavailable for analysis.

From the point of view of a library systems analyst, a narrow view of responsibilities was developed for this study. Taking a set of information requests from administrators and from research assistants involved in this study, the following activities were performed: (1) analysis of the requests in the light of data available in LCS, (2) development of the computer programs to process the data and, (3) production of the reports in as simple and straightforward a manner as possible.

There will be no attempt to draw conclusions from results of this study. It is the author's hope that the data will be of use in and of itself to librarians.

METHOD

LCS is an on-line circulation control system presently operating on an IBM 370/158 in a time-sharing environment. All files used for daily activity are disk files accessed directly. The two files of concern to this study are (1) the master file: containing one record per title with individual holding fields for volumes and, (2) the archive file: containing one record of each transaction recorded in the on-line system. The period under investigation is from January to December 1972.

The Ohio State University Libraries is a large research library system serving a student body of over 50,000 students. During 1972 this collection consisted roughly of one million titles and two and one-half million volumes. There is one large main library and twenty-four separate collections in geographically scattered locations.

Each location is connected to LCS by on-line terminals in a mixture of typewriter and CRT devices. In addition, a telephone center can receive calls from patrons and charge materials. The telephone patron has the option of picking up the book at the library or having the book

mailed to a campus address. Each terminal has access to the master file and the capability of charging any book available in LCS.

The master file consists of approximately one million title records containing the following: call number, author, title, edition statement, title number, publication date, Library of Congress card number, type of material indicator, copy, volume, location, and circulation condition code.

The archive file contains records of charges, discharges, renewals, saves, and snags. Elements are: title number, transaction type, volume, copy, location, date due, date of transaction, patron identification, and terminal location. There are 1,610,019 records on the archive file for the calendar year 1972. The file is stored on magnetic tape.

All computer programs were written in PL/1 and performed the following general activities: (1) Archive tapes were sorted by title number to facilitate on-line access to the master file. (2) A special list of title numbers was added to the archive file to generate reports on specific titles. (3) The archive records were then passed against the master file and three report files were created. (4) Each of the report files was sorted if necessary and used to produce the final reports. Research assistants for this study were John Aubry, five associated University Libraries and Marguerite Lee Strand, The Ohio State University Libraries.

RESULTS

Report I: Subject Distribution of Circulation Activity

This is a report of activity correlated to the Library of Congress class and hence a subject report. The limitations of the LC class number as a subject descriptor are patent and in addition there are a number of factors which must be considered. Law titles (class K) are rarely cataloged at OSU; the Law Library operates separately from the system. A number of history titles have not been reclassified and remain as AH which is outside the LC system. A great quantity of special materials are "non-LC class" such as microfilms, theses, records, etc. Music titles (class M) were carried in LCS with a prefix which eliminated them from this study.

Please refer to reports for the description of report elements which are underlined below.

LC Class: These class breakdowns are taken from A Guide to Library of Congress Classification, John P. Immroth, Libraries Unlimited, Inc., 1968. The first entry, "Non-LC Class", represents all activity on call numbers not in the LC system.

Faculty: The number of charges and renewals for faculty patrons.

Student: The number of charges and renewals for student patrons.

C-Card: The number of charges and renewals for courtesy card users. Two classes of courtesy cards are issued; one for faculty privileges and one for shorter periods.

Special: The number of charges and renewals for special patrons. Special patrons consist of reserve, cataloging, bindery, various interlibrary loan programs, etc.

Tot. Chgs: The total of all charges and renewals.

Percent: The percentage of total charges and renewals in this class.

Saves: The number of saves placed on each title.

Percent: Same.

Snags: The number of snags placed on each title. These figures may be unusually high due to the newness of the system and the superior ability of the computer system to provide inventory control.

Percent: Same.

Report II: Patterns of Circulation - Subject Correlation

This report is a breakdown by broad LC class letter of charge and renewal activity. Activity is further broken down by local and remote. A local charge is a transaction for which the location of the book and the terminal performing the charge are the same. That is to say that a Main Library book is charged out at a Main Library terminal. Remote charges are the opposite; the material is charged from a terminal location other than the holding location. Note that special patron charges are ignored.

Please refer to the reports for the following data elements:

Faculty-Staff Frequency * Percent: The number of charges and renewals. Percentage is the percent of the horizontal total frequency.

Student Frequency * Percent: Same.

Courtesy Card Frequency * Percent: Same.

Total Frequency * Percent: The number is the horizontal total. Percentages are vertical. All percentages in the LC class are percentages of the total for that class. The "TOT CIRC" percentage for the whole class is a percentage of the grand total circulation for LCS.

LC Class: A broad class breakdown which includes non-LC and grand totals.

Local-Remote-Total: Location categories of activity.

Charges-Renewals-Tot Circ.: Type of transaction and total.

Report III: Patterns and Levels of Circulation

This report identifies by library location circulation activity. (Exhibit A). Two locations in this report show no activity. The Journalism Library (JOU) was without a terminal for the entire year and hence its activity was not recorded. The Law Library (LAW) is not a part of the system as previously mentioned although some titles are carried for information purposed on the LCS master file.

The telephone center is carried as a separate location on this report although it is physically located in the Main Library.

Other locations (OTH) are terminals not associated with a specific collection. This would include terminals located in the computer center, demonstration terminals, etc.

Data elements correspond to Report II.

Reports IV, V, and VI: Serial High Volume Titles, Monograph High Volume Titles, and Mono-Set High Volume Titles

This report is a detailed listing by type of material of all titles showing a high level of charge and renewal activity. The sequence is in descending order by number of charges and renewals. Three lists are produced for Serials, Monographs, and Monographic Sets. Monographic sets are a type of material defined for the purposes of LCS as any title with volume identification too complex to be adequately stored in detail. The term does not have any bibliographic connotation in this usage. The connotation of terms "serial" and "monograph" must be left to Welster's Dictionary as a noncontroversial definition is not available in library literature.

"High volume" has been arbitrarily defined as six or more transactions for serials and monograph sets and over nineteen transactions for monographs. The high cut-off for monographs was used in order to reduce the size of the report. If six were used, the report would contain 31,830 titles!

Items on reserve or noncirculating serial titles will not appear on this report.

A title appearing in the Serial Report with 856 charges is "The Barnwell Addresses." The title is commonly used to demonstrate the system and the activity total in no way reflects our patron's passion for this opus.

Data elements of this report are self explanatory. The data may contain errors which are carried on LCS computer files but hopefully are not reflected in The OSU Libraries card catalog.

Report VII: Listing of Circulation Transactions for a Selected Sample of Scientific Periodical Titles

This report is a detailed listing of transaction activity on a list of selected titles. Titles were selected from Current Serials Received by the National Lending Library, March 1971, London, HMSO, 1971, using a standard random sampling technique. Titles were only selected if carried in the LCS system. The listing is in rank order by the number of transactions. Transactions are saves, charges, and renewals.

Volume holdings of serial holdings are not available currently in LCS and hence the number of volumes available for circulation is unknown. In some department libraries serial volumes are not allowed to circulate. This will obviously be reflected in activity listings.

Data elements are described in the following paragraphs. The basic title information is followed by the detail transactions which are in turn followed by totals for that title.

Rank: Rank order from 1 to 440 in descending order by number of transactions.

Title #: The title number is a sequence number assigned by LCS and has no bibliographic significance.

Author ** Title: If both author and title are present, they will be separated by "**".

Call Number: Self explanatory.

Chgs.: Total number of charges.

Rnwl: Total number of renewals.

Save: Total number of saves.

Fac-Stud-C-Card-Spec: Totals by type of borrower.

Copy: Copy number of the transaction. Due to the complexity of serial holdings the denotation of the copy number may not be readily apparent.

Volume: Same as for copy.

Date: The date of the transaction is in the form of the last two digits of year followed by the Julian date.

Location: The library location of the copy.

Terminal: The location of the terminal which executed the transaction.

Patron: The patron type.

CONCLUSIONS

Reports I, II, and III are based on 668,909 charges, 218,333 renewals, 21,052 saves and 22,255 snags. Previous reports of subject activity have used various forms of sampling techniques. The present study provides empirical data for further analysis and study.

The High Volume reports will hopefully be of use to librarians who are presently being faced with the unpleasant task of reducing purchases necessitated by budget reductions.

The listing of special titles selected from the National Lending Library may provide information for decisions concerning cooperative use of infrequently accessed serials in projects such as that at The Center for Research Libraries. However any decisions based on titles in this report will need to take into consideration factors which do not appear on the reports, such as volume holdings, reserve use, circulation status, etc.

All reports were produced using 64.5 minutes of central processor (CPU) time on an IBM 370/158 computer.

These reports represent a mere scratch in the surface of the potential of modern computer systems to collect and report vast quantities of data which can aid the progress of modern library systems. The usefulness of the data can only be demonstrated by further studies and the practical application of decisions made by library administrators based on these data.
